Power Engineering Software

Specialized Consulting Services

Technical Engineering Courses

IT Solutions & Projects

Overview

CYME INTERNATIONAL was founded in 1986 with a mandate to provide high quality Power Engineering Software Solutions to the electrical industry worldwide. CYME was rapidly recognized internationally as a world-class Power Engineering Software provider and now more than 5000 copies of our software solutions stand behind thousands of T&D projects in over 100 countries around the world.

Our Mission

The mission of CYME International is to deliver "best-of-breed" Power Engineering Software Solutions and Services to the electrical industry worldwide by combining cutting-edge technology and engineering expertise.

Our professional team is committed to build enduring partnerships with our clients by delivering the best solutions and providing unsurpassed customer services.

CYME Provides End-to-End Solutions

CYME provides complete solutions to assist customers in addressing their most demanding engineering requirements. Our solutions are based on three complementary lines of services:

Power Engineering Software - CYME is offering the most comprehensive line of Power Engineering Software available to the industry today. CYME's Electrical Analysis Software Solutions are readily available for customers immediate use in planning and engineering applications. The same solutions can be easily customized and seamlessly integrated as an embedded calculation engine with existing applications.

Integration & Custom Software Development - CYME can assist you in integrating its software solutions within your IT environment. In addition we can effectively develop custom software applications for planning, operating and/or training purposes.

Specialized Consulting Services - CYME offers a wide range of consulting services using state of the art technologies to assist customers in addressing new and emerging system problems. These services include, but not limited to, power system studies for transmission, distribution and industrial systems.

CYME's engineering staff is at a high degree of skill and their knowledge covers, almost every area of power system analysis. Backed by extensive experience in systems' planning, design and operation they provide a range of options in terms of specialization, experience, and know-how.

Technical Engineering Courses

CYME recognizes the need of power system engineers to maintain a high degree of technical knowledge applicable to their field of practice. The ever-changing needs of power industry, as it experiences continuous changes in its structure and operation practices, are creating new challenges. These challenges require sophisticated and innovative solutions.

New and advanced technologies are being developed to address these challenges and the practicing engineer should stay current with these developments to be able to meet system performance requirements effectively.

CYME now offers a Technical Engineering Courses program which is centered on the specific needs of our customer base. These courses are prepared by the CYME personnel in cooperation with experts, world-renowned in their discipline.

Our Involvement in the Industry

CYME's engineers are heavily involved in industry activities by conducting seminars and workshops for utilities and industrial groups worldwide. They participate in technical societies such as IEEE, CIGRÉ and International Standards Committees by presenting technical papers and taking part in their working groups and task forces.

CYME's engineers have organized training sessions and seminars in the USA, Canada, United Kingdom, Peru, Indonesia, Malaysia, Singapore, France, Senegal, United Arab Emirates, Australia, India, Ivory Coast, Zimbabwe, etc.

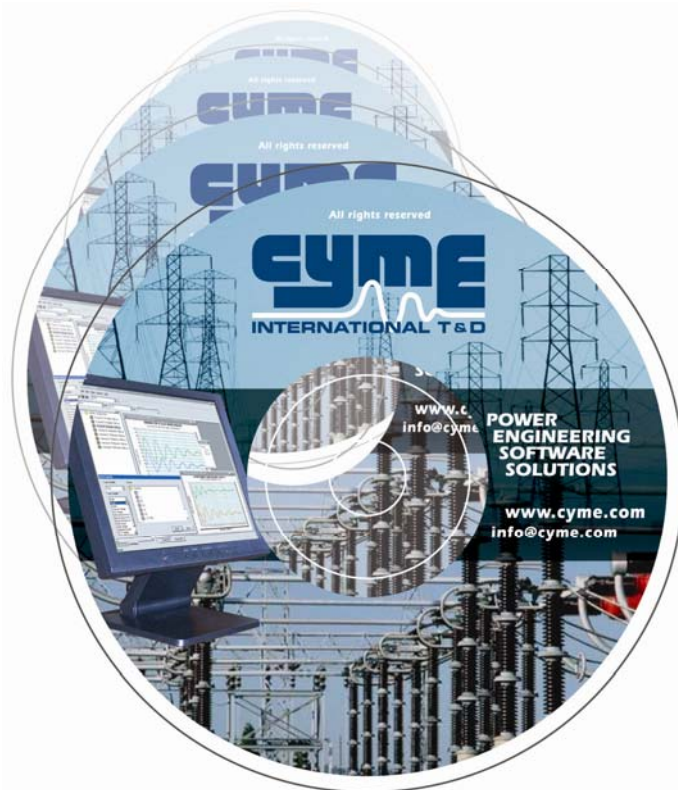

This global involvement in the electrical industry is an important component of our complete solution as it allow us to stay up-to-date with the most relevant problems and the means to deal with them. Putting our accumulated experience and quality resources at your service will enable you to address your current and future needs and help you in harnessing better and longer lasting asset-management solutions.

Our Commitment to Customer Service

Over the past 20 years, CYME has built a strong reputation with its clients by delivering the best solutions and providing unsurpassed customer services. Our professional team of dedicated experts is committed to work closely with your engineers throughout the entire project to achieve its successful completion.

CYME is committed to respond to customer inquiries within the business day and our local agents in over 38 countries around the world provide customer support locally, in the language of the region.

Rest assured that CYME International is committed to offer unsurpassed customer service.
